---

## **Fly Infinity Platform**

**Token backing network/project contract: Fly Infinity Network**

**Token contract: Fly Infinity Token (FIT)**

# **Fly Infinity Token (FIT)**

---

## **1 — What is Fly Infinity Platform?**

Fly Infinity Platform

is a decentralized financial platform whose goal is to create a healthy and income-generating network with a stable, transparent digital asset that is resistant to sudden market crashes.

The economic core of this platform is its decentralized network, namely:

Fly Infinity Network

and its very special token, namely:

Fly Infinity Token (FIT)

which complement each other.

# Fly Infinity Token (FIT)

---

## 2 — What is Fly Infinity Token (FIT)?

FIT is a token with real backing, whose price is calculated based on the real assets inside the smart contract, not based on market hype. It is also the only token in the world in which the founder team has no specific percentage or profit, and all fees and profits belong to the entire token community.

FIT price formula:

FIT Price = Amount of DAI inside the contract ÷ Total existing FIT

# Fly Infinity Token (FIT)

---

## 3 — Difference between FIT and regular tokens

In most projects:

Prices are determined on exchanges

Whales can dump

Real backing is not clear

In Fly Infinity Token:

Buying and selling only through the FIT contract

Each purchase = entry of real DAI

Each sale = burning FIT

No external market can manipulate the price

# Fly Infinity Token (FIT)

---

## 4 — Buying Fly Infinity Token (FIT)

FIT purchase process:

1. The user pays DAI
2. A 3% purchase fee is deducted
3. The full amount enters the FIT contract liquidity
4. New FIT tokens are minted with the net amount

Result:

Liquidity increases

FIT price increases

Tokens are minted only equal to real money

# Fly Infinity Token (FIT)

---

## 5 — Selling Fly Infinity Token (FIT)

FIT selling process:

1. The user sells FIT to the contract
2. Tokens are burned
3. Token value is calculated at the current price
4. A 6% selling fee is deducted
5. The fee is returned to liquidity

Result:

Supply decreases

Part of the liquidity remains in the system

Selling does not destroy the system

# Fly Infinity Token (FIT)

---

## 6 — Why does FIT price not easily crash?

Because in Fly Infinity Token:

Selling = token burning

Selling fee = liquidity reinforcement

Buying fee = liquidity reinforcement

Price is calculated inside the contract

Even large sell-offs:

Do not necessarily reduce the FIT price

In many cases, they increase the price

# **Fly Infinity Token (FIT)**

---

## **7 — The role of Fly Infinity Network**

Fly Infinity Network is a project that continuously:

Injects real DAI into the FIT contract

Without minting new tokens, and this DAI injection increases exponentially.

Example:

Injection is done hourly throughout all 24 hours using DAI tokens, which monthly increases to tens, hundreds, and millions of dollars

This means:

Growth of FIT price

Without dilution of users' assets

# Fly Infinity Token (FIT)

---

## 8 — Step-based purchase model in Fly Infinity Token

Buying FIT is fully controlled.

Only people can buy who:

Are members of Fly Infinity Network

Have completed the step-based requirements

Each step:

Has a specific purchase cap

Can only be purchased once up to the specified limit

Result:

Prevention of sudden whale entry

Healthy and step-by-step price growth

# Fly Infinity Token (FIT)

---

## Purchase step details:

**Step 1:** Only registered users can buy once up to 100 DAI

**Step 2:** With 1 networking point earned, can buy once again up to 100 DAI

**Step 3:** With 10 networking points earned, can buy once again up to 100 DAI

**Step 4:** With 30 networking points earned, can buy once again up to 100 DAI

**Step 5:** With 100 networking points earned, can buy once again up to 1,000 DAI

**Step 6:** With 300 networking points earned, can buy once again up to 1,000 DAI

**Step 7:** With 1,000 networking points earned, can buy once again up to 10,000 DAI

**Step 8:** With 3,000 networking points earned, can buy once again up to 10,000 DAI

**Step 9:** With 10,000 networking points earned, can buy once again up to 100,000 DAI

**Step 10:** With 30,000 networking points earned, can buy once again up to 100,000 DAI

**Step 11:** With 100,000 networking points earned, can buy once again up to 1 million DAI

## Fly Infinity Token (FIT)

---

**Step 12:** With 300,000 networking points earned, can buy once again up to 1 million DAI

**Step 13:** With 1 million networking points earned, can buy once again up to 10 million DAI

**Step 14:** With 3 million networking points earned, can buy once again up to 10 million DAI

**Step 15:** With 10 million networking points earned, can buy once again up to 100 million DAI

**Step 16:** With 30 million networking points earned, can buy once again up to 100 million DAI

**Step 17:** With 100 million networking points earned, can buy once again up to 1 billion DAI

**Step 18:** With 300 million networking points earned, can buy once again up to 1 billion DAI

**Step 19:** With 1 billion networking points earned, can buy once again up to 10 billion DAI

# Fly Infinity Token (FIT)

---

## 9 — Selling limitations for system stability

In Fly Infinity Token:

If a user sells their FIT at a specific step,

They are not allowed to buy again until reaching the next step

Result:

Elimination of short-term trading

Encouragement of holding

Reduction of selling pressure

## Fly Infinity Token (FIT)

---

### 10 — Does Fly Infinity Token (FIT) have a bubble?

No classic bubble

Because:

Each FIT has real DAI backing

Price is calculated solely based on liquidity

Growth without real money is impossible

Volatility may exist

But there is no unsupported bubble

## Fly Infinity Token (FIT)

---

### 11 — Who is Fly Infinity Token suitable for?

- ✓ Those with a mid-term and long-term vision
- ✓ Those looking for an anti-dump system
- ✓ Those who want real and gradual growth
- ✓ Those who prefer economic logic over short-term trading
- ✗ Not suitable for short-term traders

# Fly Infinity Token (FIT)

---

## 12 — Final summary

Fly Infinity Token

A transparent financial system

With real DAI backing

Fly Infinity Token (FIT)

Price = Liquidity ÷ Supply

Purchase fee: 3%

Selling fee: 6%

Buy = Mint (creation)

Sell = Burn (destruction)

Fly Infinity Network:

Continuous injection of real money

Without minting new tokens

# **Fly Infinity Token (FIT)**

---

## **13 — Final message**

Fly Infinity Platform:

Does not promise unrealistic profits

But also does not allow capital destruction

Its growth depends on real money and logical user behavior

Fly Infinity is a financial platform, not a pump-and-dump project.

Experience infinite financial growth with Fly Infinity.
