

Fly Infinity Token (FIT)

Fly Infinity Platform

Fly Infinity Platform is a next-generation decentralized financial platform designed with one clear objective:

to create a transparent digital asset with real backing and zero risk of price reversal.

Unlike most crypto projects whose prices are driven by hype, speculation, whale manipulation, and pump-and-dump cycles, Fly Infinity is built on a strictly engineered economic logic that does not allow the token price to move backward under any circumstances, even in extreme market conditions.

The economic core of the platform consists of two fully complementary components:

Fly Infinity Network as the capital-injecting and backing network

Fly Infinity Token (FIT) as the primary digital asset with 100% real backing

Together, they form a closed, intelligent, and crash-resistant financial system.

Fly Infinity Token (FIT)

What Is Fly Infinity Token (FIT) and Why Is It Unique?

FIT is a truly asset-backed token, not a token driven by promises, marketing, or market hype.

The price of FIT is never determined by exchanges, traders, or external markets.

It is calculated exclusively inside the smart contract based on real liquidity.

FIT Price Formula:

$$\text{FIT Price} = \text{Amount of DAI inside the contract} \div \text{Total existing FIT}$$

A key and unique characteristic:

The founding team holds no special allocation, percentage, or privileged profit.

All fees and profits belong entirely to the token community.

The Core Feature of Fly Infinity:

A Token That Never Goes Down in Price

This is the defining principle of Fly Infinity, and it is fully backed by system logic:

Fly Infinity Token (FIT)

- * FIT can only be bought and sold through its smart contract
- * Every buy = real DAI entering the contract
- * Every sell = FIT tokens being burned
- * Price is calculated internally, not by the market
- * No external exchange can manipulate the price

As a result:

Even large sell-offs do not necessarily reduce the price — in many cases, they increase it.

In other words:

FIT is structurally anti-dump, anti-crash, and anti-manipulation by design.

FIT Price Growth Roadmap (Future Outlook)

The price growth of FIT is not speculative; it follows a logical, step-based system:

Fly Infinity Token (FIT)

Phase 1 | Stabilization & Accumulation

- * Controlled user entry through step-based participation
- * Gradual liquidity growth
- * Smooth and non-volatile price increase

Phase 2 | Accelerated Growth

- * Continuous DAI injection by Fly Infinity Network
- * Exponential liquidity growth without minting new tokens
- * Strong upward price momentum

Phase 3 | System Maturity

- * Entry of large capital without dump risk
- * Sustainable and logical price appreciation
- * FIT evolving into a reserve-grade digital asset within the ecosystem

Key point:

FIT has no theoretical price ceiling,
because its price grows strictly in proportion to real capital
inflow.

Fly Infinity Token (FIT)

Why Fly Infinity Cannot Form a Bubble or Collapse

- * Every FIT is backed by real DAI
- * Growth without real money is impossible
- * Selling does not drain the system's liquidity
- * A portion of selling fees always reinforces liquidity

Therefore:

A classic speculative bubble cannot exist in Fly Infinity.

Security of Fly Infinity Token (FIT)

From a security standpoint, Fly Infinity is built at the highest standard:

- * No hidden admin privileges or centralized control
- * No ability for the team to arbitrarily change contract parameters
- * Fully controlled buy and sell mechanisms
- * No dependency on exchanges
- * No pump-and-dump exposure
- * Fully transparent pricing logic

Fly Infinity Token (FIT)

Simply put:

In Fly Infinity, users' capital is never sacrificed to others' behavior.

Final Summary

Fly Infinity is not a typical crypto project.

It is a financial system engineered from first principles.

- * Real asset backing
- * Fully transparent pricing
- * Logical and sustainable growth
- * No price reversals
- * No dumps
- * No whale games

**Fly Infinity does not promise unrealistic profits,
but it also does not allow capital destruction.**

Fly Infinity Token (FIT)

The details of the Fly Infinity Token plan in 13 paragraphs are as follows:

Fly Infinity Platform

Token backing network/project contract: Fly Infinity Network

Token contract: Fly Infinity Token (FIT)

1 — What is Fly Infinity Platform?

Fly Infinity Platform

is a decentralized financial platform whose goal is to create a healthy and income-generating network with a stable, transparent digital asset that is resistant to sudden market crashes.

The economic core of this platform is its decentralized network, namely:

Fly Infinity Network

and its very special token, namely:

Fly Infinity Token (FIT)

which complement each other.

Fly Infinity Token (FIT)

2 — What is Fly Infinity Token (FIT)?

FIT is a token with real backing, whose price is calculated based on the real assets inside the smart contract, not based on market hype. It is also the only token in the world in which the founder team has no specific percentage or profit, and all fees and profits belong to the entire token community.

FIT price formula:

$$\text{FIT Price} = \text{Amount of DAI inside the contract} \div \text{Total existing FIT}$$

3 — Difference between FIT and regular tokens

In most projects:

Prices are determined on exchanges

Whales can dump

Real backing is not clear

In Fly Infinity Token:

Buying and selling only through the FIT contract

Each purchase = entry of real DAI

Each sale = burning FIT

Fly Infinity Token (FIT)

No external market can manipulate the price

4 — Buying Fly Infinity Token (FIT)

FIT purchase process:

1. The user pays DAI
2. A 3% purchase fee is deducted
3. The full amount enters the FIT contract liquidity
4. New FIT tokens are minted with the net amount

Result:

Liquidity increases

FIT price increases

Tokens are minted only equal to real money

5 — Selling Fly Infinity Token (FIT)

FIT selling process:

1. The user sells FIT to the contract
2. Tokens are burned
3. Token value is calculated at the current price
4. A 6% selling fee is deducted

Fly Infinity Token (FIT)

5. The fee is returned to liquidity

Result:

Supply decreases

Part of the liquidity remains in the system

Selling does not destroy the system

6 — Why does FIT price not easily crash?

Because in Fly Infinity Token:

Selling = token burning

Selling fee = liquidity reinforcement

Buying fee = liquidity reinforcement

Price is calculated inside the contract

Even large sell-offs:

Do not necessarily reduce the FIT price

In many cases, they increase the price

Fly Infinity Token (FIT)

7 — The role of Fly Infinity Network

Fly Infinity Network is a project that continuously:

Injects real DAI into the FIT contract

Without minting new tokens, and this DAI injection increases exponentially.

Example:

Injection is done hourly throughout all 24 hours using DAI tokens, which monthly increases to tens, hundreds, and millions of dollars

This means:

Growth of FIT price

Without dilution of users' assets

8 — Step-based purchase model in Fly Infinity Token

Buying FIT is fully controlled.

Only people can buy who:

Are members of Fly Infinity Network

Have completed the step-based requirements

Fly Infinity Token (FIT)

Each step:

Has a specific purchase cap

Can only be purchased once up to the specified limit

Result:

Prevention of sudden whale entry

Healthy and step-by-step price growth

Purchase step details:

Step 1: Only registered users can buy once up to 100 DAI

Step 2: With 1 networking point earned, can buy once again up to 100 DAI

Step 3: With 10 networking points earned, can buy once again up to 100 DAI

Step 4: With 30 networking points earned, can buy once again up to 100 DAI

Step 5: With 100 networking points earned, can buy once again up to 1,000 DAI

Step 6: With 300 networking points earned, can buy once again up to 1,000 DAI

Fly Infinity Token (FIT)

Step 7: With 1,000 networking points earned, can buy once again up to 10,000 DAI

Step 8: With 3,000 networking points earned, can buy once again up to 10,000 DAI

Step 9: With 10,000 networking points earned, can buy once again up to 100,000 DAI

Step 10: With 30,000 networking points earned, can buy once again up to 100,000 DAI

Step 11: With 100,000 networking points earned, can buy once again up to 1 million DAI

Step 12: With 300,000 networking points earned, can buy once again up to 1 million DAI

Step 13: With 1 million networking points earned, can buy once again up to 10 million DAI

Step 14: With 3 million networking points earned, can buy once again up to 10 million DAI

Step 15: With 10 million networking points earned, can buy once again up to 100 million DAI

Step 16: With 30 million networking points earned, can buy once again up to 100 million DAI

Fly Infinity Token (FIT)

Step 17: With 100 million networking points earned, can buy once again up to 1 billion DAI

Step 18: With 300 million networking points earned, can buy once again up to 1 billion DAI

Step 19: With 1 billion networking points earned, can buy once again up to 10 billion DAI

9 — Selling limitations for system stability

In Fly Infinity Token:

If a user sells their FIT at a specific step,

They are not allowed to buy again until reaching the next step

Result:

Elimination of short-term trading

Encouragement of holding

Reduction of selling pressure

10 — Does Fly Infinity Token (FIT) have a bubble?

No classic bubble

Because:

Fly Infinity Token (FIT)

Each FIT has real DAI backing

Price is calculated solely based on liquidity

Growth without real money is impossible

Volatility may exist

But there is no unsupported bubble

11 — Who is Fly Infinity Token suitable for?

✓ Those with a mid-term and long-term vision

✓ Those looking for an anti-dump system

✓ Those who want real and gradual growth

✓ Those who prefer economic logic over short-term trading

✗ Not suitable for short-term traders

12 — Final summary

Fly Infinity Token

A transparent financial system

With real DAI backing

Fly Infinity Token (FIT)

Fly Infinity Token (FIT)

Price = Liquidity ÷ Supply

Purchase fee: 3%

Selling fee: 6%

Buy = Mint (creation)

Sell = Burn (destruction)

Fly Infinity Network:

Continuous injection of real money

Without minting new tokens

13 — Final message

Fly Infinity Platform:

Does not promise unrealistic profits

But also does not allow capital destruction

Its growth depends on real money and logical user behavior

Fly Infinity is a financial platform, not a pump-and-dump project.

Experience infinite financial growth with Fly Infinity.
